

Renovations & Additions and Mass Save Incentive Programs

Thousands of homeowners who are served by the major utility companies are taking advantage of substantial rebates and incentives offered by Mass Save.

HERS Raters assist contractors and homeowners in taking advantage of this program. A before and after energy rating is done and rebate amounts are determined by the amount of increased energy savings above a baseline. Raters advise on how to maximize rebates and at the same time meet the MA energy code requirements.

This presentation will cover eligibility requirements, what incentives look like, and information that needs to be provided by the contractor or homeowner for the step-by-step process to work.

Incentives for New Construction and All Electric Homes will be discussed along with best applications using Heat Pumps and Recovery Ventilation.
